AWARDS

- EMPLOYEE OF THE MONTH
- APPRECIATION FOR COMPLETION OF CLIP

CERTIFICATIONS

- COMPLETE JAVA 7 – NIIT (2013)
- FLUTTER & DART – UDEMY (2020)

Project Details:

MConnect - It is the application of SBI Life, aimed to be used by sales person for selling life insurance policies, currently 98% of the policies source are done through this android application.

I am working on adding new products to the application and maintaining the application.

MConnect (Angular) - PWA port of the android application, currently in UAT, bringing MConnect to all platforms.

I was involved in analysis and designing of the application, along with UML diagrams and Database designing, and also helped port the core functionalities of the android application to Angular framework

SmartCare (Angular) - Its is customer centric application meant for after sales services, gives to option to view details about your policies, premium payment, premium calculator and other miscellaneous things.

It was a pure JS application, I helped it move to the angular framework.

CLIP PWA - Claims Investigation Portal : This application was entirely developed by me, it is a PWA application build on HTML, CSS and pure JS. It is meant for Death Claims Investigation, Since the process of investigations where done mainly though emails and other physical documents, this application brings a new life into the investigation process.

CLIP also has a web console build on .NET framework (I was involved in planning, analysis, documentation, not in coding)

CLIP PWA Angular – Since there are a lot of security issues in js application, CLIP was decided to be ported to angular
This Angular port of CLIP is also in under development by me and a few associates.

Software Developer Intern, Textronics Design Systems

January 2020 – June 2020

I was a Software development intern, the company was developing a virtual trial room, they tasked up with creating a software which can superimpose a virtual cloth material on to a image in real time, Technologies used: Python with OpenCV Is an In-house tool currently used by the graphics department to automatically extract the cloth textures from the model's photograph. There was also supposed to be an Android version of the tool, but no substantial progress was made till i was in the organization, only the basic structure of the application was in development.
